Art Unit: 2815

#### **DETAILED ACTION**

## Claim Objections

Claim 1 is objected to because of the following informalities: in line 3 of the claim, the term "to the exterior" lacks antecedent basis. Appropriate correction is required.

Claim 3 is objected to because of the following informalities: in lines 1-2 of the claim, the phrase "comprises <u>are</u> of an" contains grammatical or spelling errors. Appropriate correction is required.

### Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-10 are rejected under 35 U.S.C. 102(b) as being anticipated by Frye et al. (US 5,534,465).

In re claim 1, Frye et al. shows (figs. 2 and 4) and LCD driver IC chip comprising a pad member (34) connected to an internal semiconductor device circuit (21) (see connection via below the pad into the n+ region) and having an electrical connection region to the exterior. At least one insulating film (35) is

Art Unit: 2815

N

formed at a peripheral portion of the pad member and around the electrical connection region. A metal layer (36) covers the pad member and the insulating film. Figure 4 shows in another view that a bump electrode (41) is provided on the metal layer, wherein the bump electrode and the pad member lie above at least part of the semiconductor device circuit with an insulating interlayer (26) provided therebetween.

In re claim 2, Frye et al. shows (figs. 2 and 4) an integrated circuit chip comprising a device circuit, a transistor (21) in the device circuit, a pad (34) positioned above the transistor and connected to the device circuit (see connection via below the pad into the n+ region). An insulating interlayer (26) is formed between the pad and the transistor. Figure 4 shows in another view that a bump electrode (41) is on the pad.

In re claims 3 and 4, Frye inherently discloses that the circuit further comprises one of an input and output circuit because if the circuit is to be connected to the flip chip (40) as shown in figure 4, then the circuit must either receive input or provide output to that flip chip. In the same sense, the pad is either an input pad or an output pad.

In re claim 5, figure 4 of Frye shows that the bump (41) is positioned above the transistor portion (21).

In re claim 6, figure 2 of Frye shows that a via interconnects the pad (34) and the device circuit. The via is the portion under the pad (34) and connected to the contact on the n+ layer of the substrate.

Art Unit: 2815

In re claim 7, figure 2 of Frye shows that a lead layer (the contact layer on the n+ diffusion regions) of the insulating interlayer interconnects the via and the pad.

In re claim 8, figure 2 of Frye shows that a passivation film (35) is formed at a peripheral portion of the pad.

In re claim 9, figure 2 of Frye shows that a metal layer (36) covers the passivation film and the pad.

In re claim 10, figure 4 of Frye shows that the metal layer (36) is interposed between the pad (34) and the bump (41).

#### Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Barr et al. (US 2002/0000665 A1) and Kamata et al. (JP 60-154632 A) also show IC's having bump electrodes formed above the circuit.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Matthew E. Warren whose telephone number is (703) 305-0760. The examiner can normally be reached on Mon-Thurs, and alternating Fri, 9:00-5:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Tom Thomas can be reached on (703) 308-2772. The fax phone number for the organization where this application or proceeding is assigned is (703) 305-3432.

Art Unit: 2815

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 308-0956.

Matthew E. Warren
